                                                                                                                                                                                                       9
family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinocransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deliminases, EC:3.5.3.6.

These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococcus anti tumor glycoprotein" |

// note=-Amidinotransf; Region: Amidinotransferase. This family contains glycine (BC:2.1.4.1) and inosamine (BC:2.1.4.2) amidinotransferases, enzymes involved in creatine and strepptomycin biosytthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6. These enzymes catalyse the reaction: arginine + H2O <-> cirtuiline + NH3. Also found in this family is the Streptococcus anti tumour glycoprotein"

| Inote-Amidinotransf, Region: Amidinotransferase. This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine delminases, EC:3.5.3.6.

These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococcus anti tumour glycoprotein"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GIGGAIGGGCTGCTCACTGCTGCTGCTCTTAATTAACAAGAAGGTAGACTCCTGA 858

This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and erreptonycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6.
These enzymes catalyse the reaction: arginine + H2O <=> cirtulline + NH3. Also found in this family is the Streptococus anti tumour glycoprotein"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                394 TTATTCACAGGCAGAGAATTTTTTGTGGGCCTTTTCCAAAAGGACAAATCAACGAGGTGCT 453

Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 68 Row: m Column: 1
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 6912327.
Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                           133...936
Ince-Amidinotransf, Region: Amidinotransferase. This family contains glycine (EC:2.1.4.1) and incosmine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6. These enzymes catalyse.the reaction: arginine + H2O <->ctrulline + NH3. Also found in this family is the Streptococcus anti tumor glycoprotein."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          160 CTACCCGAGTCGCTCGGCCAGCACGCGCTGAGAAGCGCCAAGGGGAGGAGGTGGAGCGTC

Consortium/LLNL at: http://image.llnl.gov
Series: IRAK Plate: 41 Row: o Column: 4
This clone was selected for full length sequencing because it passed the following selection oriteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.

fonce-"Amidinotransf, Region: Amidinotransferase. This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.6. These enzymes catalyse the reaction: arginine + H2O <=> ctrulline + NH3. Also found in this family is the streptococcus anti tumour glycoprotein" |
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      81 AlavalvalcysGluGluThrAlaLeuileThrArgProGlyAlaProSerArgArgTys 100

This family contains glycine (EC:21.4.1) and inosamine (EC:21.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6. These enzymes catalyse the reaction: arginine + HZO <=> citrulline + NH3: Also found in this family is the Streptococcus anti tumor glycoprotein" | About 1 the About 1 the About 2 the About 2 the About 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      114. .917
Jonce-Amidinotransf; Region: Amidinotransferase. This fance-Amidinotransf, Region: Amidinotransferase. This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deliminases, EC:3.5.3.6. These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococcus anti tumour glycoprotein"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20
                                                                                                                                                                       Clone distribution: MGC clone distribution information can be for through the I.M.A.G.E. Consortium/LinLa at: http://image.llnl.gov Series: IRAK Plate: 129 Row: j Column: 20
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MetalaGlyLeuGlyHisProSerAlaPheGlyArgAlaThrHisAlaValValArgAla

NEDO CDNA sequencing project supported by Ministry of Economy,

Trade and Industry of Japan; CDNA full insert sequencing: Research

Association for Biotechnology (RAB); CDNA library construction:

Helix Research Institute (HRI) (supported by Japan Key Technology

Center etc.); 5- & 3-end one pass sequencing: RAB, HRI, and

Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.

//note=-Amidinotransf, Region: Amidinotransferase. This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and stresptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6.
These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococcus anti tumour glycoprotein"

                                                                                                                                              Clone distribution: MGC clone distribution information can be four through the I.M.A.G.E. Consortium/LiNL at: http://image.llnl.gov series: IRAK Plate: 132 Row: a Column: 19
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis
This clone has the following problem: The cds is short compared the longest cds in the locus.

family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes argainine deiminases, EC:3.5.3.6.

These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococus anti tumor glycoprotein"

Neuherberg, GERMANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKF2); Email s.wiemann@dkfz-heidelberg.de;
sequenced by EMBL (European Molecular Biology Laboratories,
Heidelberg/Germany) within the cDNA sequencing consortium of the
German Genome Project.
This clone (DKFZP68681716) is available at the RZPD in Berlin.
Please conteact the RZPD: Resegourcenzentrum, Heubrerweg 6, 14059
Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further
information about the clone and the sequencing project is available
at http://mips.gsf.de/proj/CoDA/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /organism="Homo sapiens"

/note="Amidinotransf; Region: Amidinotransferase. This family contains glycine (Ecr2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6.
These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococcus anti tumor glycoprotein"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 420
